SUMMARY

Product Designer specializing in enterprise UX with 3+ years of experience building scalable LMS and CMS platforms and modern digital ecosystems for B2B and consumer products. Experienced in redesigning complex workflows into accessible and intuitive experiences using WCAG 2.2 standards, scalable design systems, and modern UX principles. Brings a strong balance of systems thinking, visual craft, and product strategy across the full product lifecycle from discovery and interaction design to implementation and cross functional execution at scale.

EDUCATION

Bachelor of Engineering in Electronics and Telecommunication

Dr. DY Patil's Ramrao Adik Institute of Technology, Mumbai University

2019 – 2023

CGPA: 8.89/10

EXPERIENCE

Zeus Learning

Senior UI Designer / Visual Designer

July 2025 – Present

Mumbai, India

- Owned end-to-end visual and interaction design of Quantum LMS and CMS, defining the product's design language across enterprise-scale academic workflows for students, teachers, and administrators.
- Established UI quality standards across the product, conducting design reviews and implementation audits with 35+ developers and 8 QA engineers, reducing visual regressions and ensuring pixel-accurate delivery across releases.
- Drove design system governance and evolution, maintaining consistency across 80+ components and enforcing token-based theming, spacing, and typography standards across all product surfaces.
- Mentored 3 junior designers on visual craft, component documentation, and handoff practices, improving team-wide design-to-development efficiency by 30%.
- Partnered with Product Managers and Dev Leads on sprint planning and feature prioritization, translating product requirements into high-fidelity UI specs with detailed annotations and interaction notes.

Zeus Learning

UI Designer / Visual Designer

Aug 2023 – June 2025

Mumbai, India

- Designed fully responsive, visually cohesive student and teacher-side experiences across desktop and tablet, establishing consistent UI patterns that improved usability and workflow efficiency across the platform.
- Built and scaled a centralized design system from the ground up aligned with Angular Material, delivering 80+ reusable components with theme-based UI architecture and standardized visual interaction patterns.
- Crafted WCAG 2.2 compliant UI with accessibility-first components, annotated developer-ready design files, and detailed style guides ensuring consistent and accurate implementation across all product modules.
- Designed the visual interface for an AI-powered student evaluation feature, including feedback display patterns, response states, and loading interactions, contributing to a 60% reduction in manual evaluation effort during internal testing.

PROJECTS

Quantum LMS & CMS – Enterprise Learning Platform

End-to-End Product Design · Design Systems · Accessibility · Live Internal Product

2023 – Present

- Led end-to-end UX design of an enterprise-grade LMS and CMS for students, teachers, and administrators — owning the full design lifecycle from competitive research and discovery through implementation audits and QA handoff.
- Conducted competitive analysis across 6+ platforms (Canvas, Moodle, Schoology, Google Classroom) using heuristic evaluation, user interviews, journey mapping, and usability testing to identify workflow gaps and shape a prioritized roadmap.
- Designed fully responsive student and teacher-side experiences — dashboards, course flows, gradebook, calendar, exit cards, and LTI-integrated tools — WCAG 2.2 compliant across all components.
- Introduced gamification mechanics (streaks, badges, progress rings, leaderboards) and contextual data insight panels, improving learner engagement and surfacing actionable performance metrics for teachers.

- Built a scalable design system aligned with Angular Material — 80+ reusable components, token-based theming, motion guidelines, and a structured style guide — reducing UI inconsistencies by 40% across sprint cycles.
- Designed an **AI-powered evaluation workflow** where teachers review open-ended student responses assisted by AI-generated contextual feedback — reducing estimated manual evaluation effort by 60% during internal testing, with the feature shipping as part of the live product.

Clio — AI-Powered Investment Portfolio Management

2025

Conceptual · Fintech · AI-Assisted Trading · Conversational UX

- Designed an **AI trading assistant** that interprets natural language queries and responds with contextual, data-backed recommendations, reducing reliance on financial advisors for routine portfolio decisions.
- Conceptualized **AI-driven Smart Trade flows** that analyze a user's risk profile, market conditions, and portfolio gaps to surface automated, explainable trade recommendations, cutting average decision time by an estimated 3x.
- Designed **explainable AI patterns** across all recommendation surfaces where every suggestion exposes its reasoning ("Based on your risk tolerance and a 12% dip in your tech allocation"), building user trust and reducing drop-off on high-stakes actions.
- Mapped **AI confidence tiers** to distinct UI treatments, high-confidence signals shown as direct actions, medium-confidence as nudges, and low-confidence as watchlist alerts, preventing over-reliance on uncertain predictions and maintaining user trust at scale.

TECHNICAL SKILLS

Product & Strategy: End-to-End Product Design, Design Strategy, Roadmap Planning, Sprint Planning, Feature Prioritization, RICE Framework, Stakeholder Management, Cross-functional Leadership.

Research & Validation: User Research, Usability Testing, Heuristic Evaluation, Competitive Analysis, A/B Testing, Journey Mapping, Persona Development, Information Architecture.

Design & Systems: Figma (Auto Layout, Components, Variables, Prototyping), Design Systems, Component Libraries, Accessibility (WCAG 2.2), Interaction Design, Visual Design, Responsive Design.

AI & Data: AI-Assisted UX, Conversational UI Design, Explainable AI Patterns, Data Visualization, Dashboard Design, Metrics-Driven Iteration.

Collaboration & Delivery: Agile, Jira, Microsoft Teams, Developer Handoff, Design QA, Implementation Audits, Git, GitHub.

Frontend: HTML5, CSS3, JavaScript, ReactJS, TailwindCSS.
